

...the power of intelligent scanning

AUTOMATION SERIES

The Automation Series offers Sage MAS 90 and MAS 200 ERP customers an expandable feature set with solutions for every level of warehouse automation. The Lite, Pro and Elite (packages) easily manage everything from basic shipping and receiving to RFID and voice-directed picking. If your distribution facility is struggling with slow or inaccurate distribution processes, this solution has the tools to solve them.

ACCESS REAL-TIME VISIBILITY OF INVENTORY STATUS

It is important to know what orders are shipping, what purchase orders are being received and the progress of your inventory counts. With Scanco's Automation Series Console, you will be able to view the activity for each and every handheld. When an important customer calls to ask their order status, the answer will be at the click of a mouse.

EXPERIENCE LIVE VALIDATION

There is nothing worse than shipping the wrong product to your customer or paying for a product you have not received. The Automation Series is built with a direct connection to your MAS 90/MAS 200 database to verify every item as it is shipped or received. Accuracy will become the rule in your warehouse.

GO PAPERLESS

The Automation Series is designed to replace all the functions that paper once played in your warehouse. When a new order is placed and must be shipped, the handheld user receives an alert and can commence picking immediately. Once the order has been scanned and shipped, the invoice is sent to MAS 90/MAS 200 ERP wirelessly. Paper will become a thing of the past.

BUILD A SOLUTION THAT MEETS YOUR NEEDS

Every company has unique needs when it comes to the level of automation they are interested in implementing. Scanco has structured the product with that flexibility in mind. Each level adds functionality and leads to a complete warehouse management solution.

AUTOMATION SERIES HIGHLIGHTS:

- Work inside or outside of wireless coverage
- Live validation of scanned data
- Access real-time visibility of inventory status
- Streamline and shorten your pick/pack process
- Build a solution that meets your needs
