

...the power of intelligent scanning

AUTOMATION SERIES: ELITE

The Elite level of the Automation Series encompasses all of the latest in warehouse management technology. Distribution facilities with fast inventory movement and increased traceability needs benefit from the robust feature set the Elite Series offers.

ALL THE TOOLS YOU NEED FOR TRUE WAREHOUSE MANAGEMENT

As a warehouse manager, you are concerned with product locations, employee efficiency and complete inventory accuracy. The Elite Series level lets you manage orders by creating unique pick lists for each employee, selecting only orders that have a ship date of today or allocating inventory across pick lists based on availability. The Automation Series Console provides a real-time view of each handheld's activities so that you always know what is happening on the warehouse floor.

PUT AWAY INVENTORY IN THE RIGHT PLACE EVERY TIME

Bin locations are fixed but inventory is mobile and easily lost. Employees need to know which bin to put inventory to ensure that it can be found in the future. The Elite Series will allow you to receive in product then be directed to the default bin location of the item. There will never be any confusion about the placement of your items.

PICK THEN PACK ORDERS IN TWO SEPARATE STEPS

Most distribution companies do not want an order to show as shipped when it has only been picked. The Elite Automation Series directs your employees through the picking process then requires packers to scan the items a second time as they are packing. Orders show as picked, packed or shipped in the Automation Console so that you always know where your orders stand. Picking and packing are guaranteed fast and accurate every time.
