

...the power of intelligent scanning

AUTOMATION SERIES: LITE

The Lite Automation Series helps companies that are just getting started with barcode technology. The Lite Series offers a simple and intuitive user interface for employees that are not familiar with handheld computers and helps you to maintain 100% inventory accuracy.

AUTOMATE BASIC SHIPPING, RECEIVING AND PHYSICAL COUNT TRANSACTIONS

Tracking inventory can seem like an overwhelming task when goods are constantly moving through your warehouse. The Lite Automation Series helps you to ship and receive product quickly and accurately by capturing movement as it is happening. The Physical Count process takes up to 75% less time using the Automation Series and inventory accuracy is easily attained.

TRAIN EASILY WITH AN INTUITIVE USER INTERFACE

Employee turnover is a fact of life but it should never slow down the pace of your warehouse. The Automation Series uses a simple icon-driven interface that leads your employees through each transaction. Training takes a matter of minutes rather than weeks so that your people can focus on getting product out the door.

WORK INSIDE OR OUTSIDE OF WIRELESS COVERAGE

Sometimes complete wireless coverage is not possible. Whether your inventory is stored outside of your local area network or you would rather not outfit your warehouse with a complete wireless network, the Lite Automation Series will support your work environment. In planned batch mode, you can download orders to the handheld and scan against them. If you would rather work within wireless coverage, the handhelds will operate even if the wireless network goes down unexpectedly. The handhelds seamlessly move to unplanned batch mode so that you can continue to work until the network is restored.

LITE SERIES HIGHLIGHTS:

- Invoice Data Entry Shipping
- Purchase Order Receiving
- Warehouse Transfers
- Physical Count
